

In the Abstract

Please amend the Abstract as follows:

An access port comprises a housing with a first opening ~~formed therein~~ and a self-sealing septum ~~mounted within the housing~~ sealing the first opening, the septum including ~~an outer surface covering the first opening and self-sealing after penetration by a needle and an~~ attachment portion for securing the septum to the housing, the attachment portion including a chamfer which, when the septum is mounted within the housing is subject to a force oriented substantially perpendicularly with respect to a plane of the outer surface, the chamfered portion redirecting a portion of the force to compress the outer surface. A septum for an access port comprises an attachment portion ~~adapted to abut~~ for abutting a septum seat of the access port and an operative surface ~~adapted to permitting~~ penetration by a needle and resealing itself after removal of the needle in combination with a chamfered portion providing a transition between the attachment portion and the operative surface, the chamfered portion re-directing a component of a force applied to the chamfered portion to compress the operative surface.
